

panduan config VPN ke mikrotik anda

1. lakukan pembelian

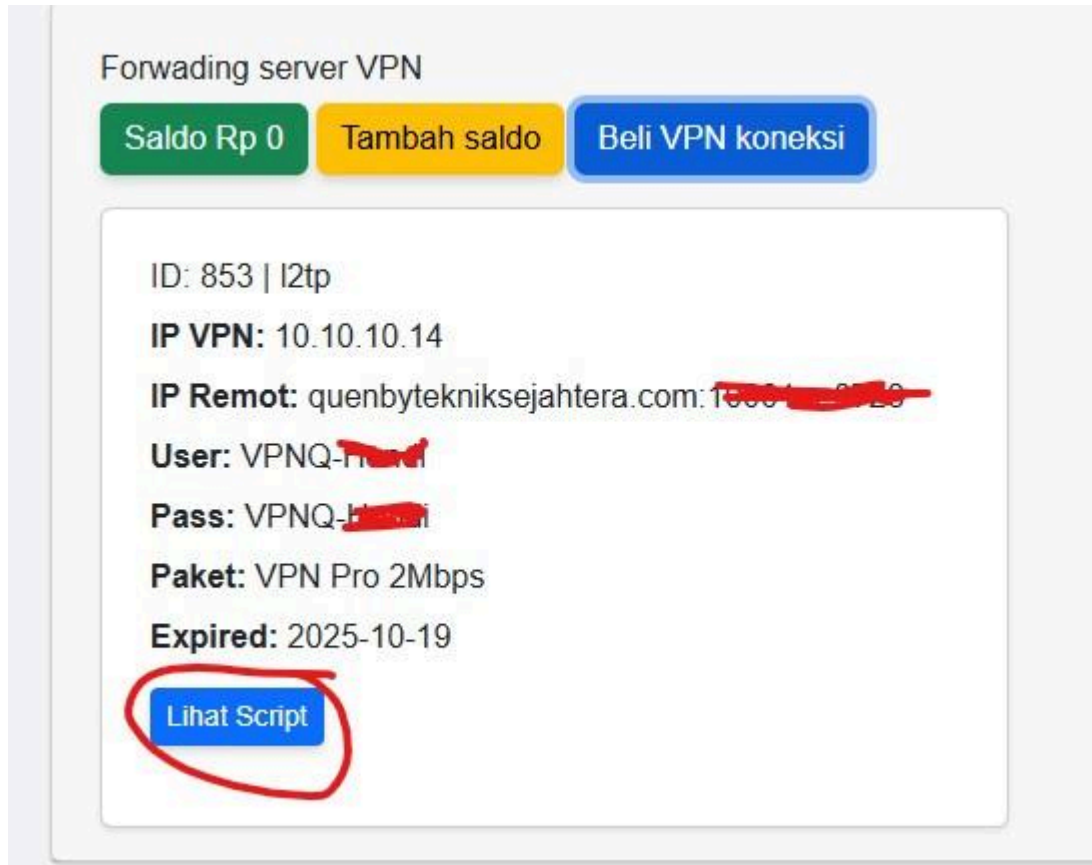

2. isi nama vpn dan port API mikrotik sesuai

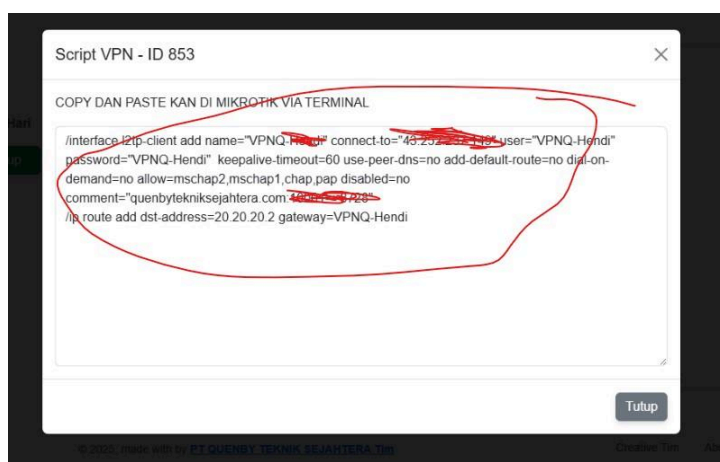

sesuaikan IP SERVICE di mikrotik anda
bagian API sama kan port nya

lalu tambah user / beli

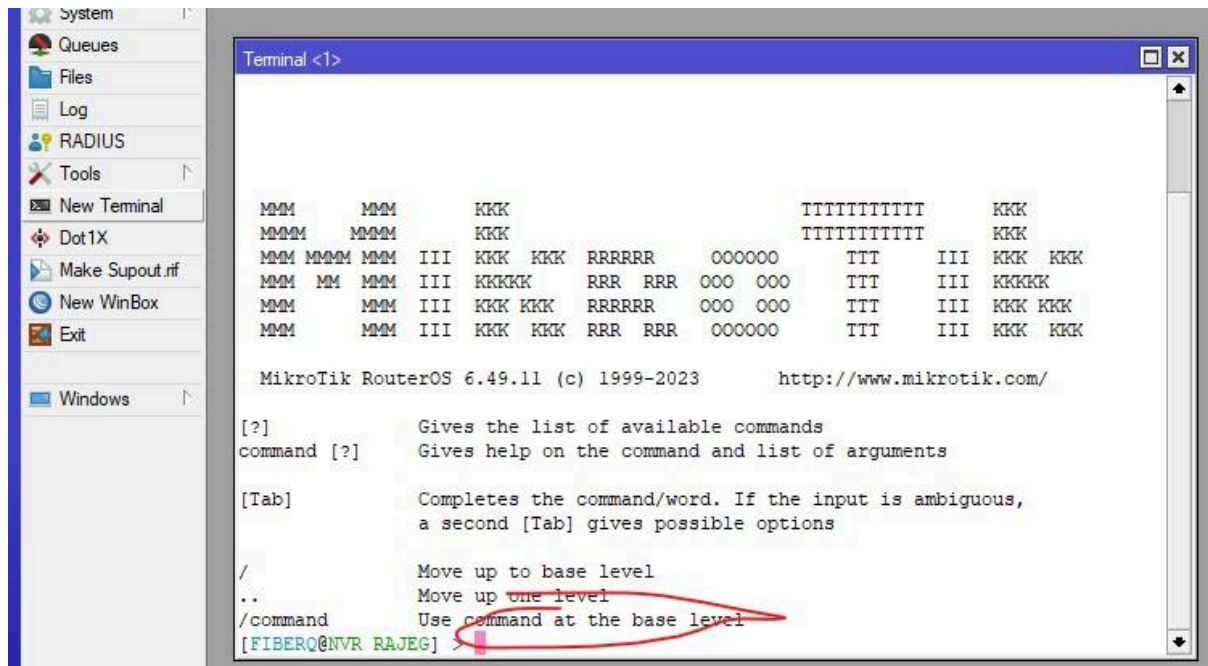

3.memasang vpn yang telah di beli di mikrotik anda

klik lihat script

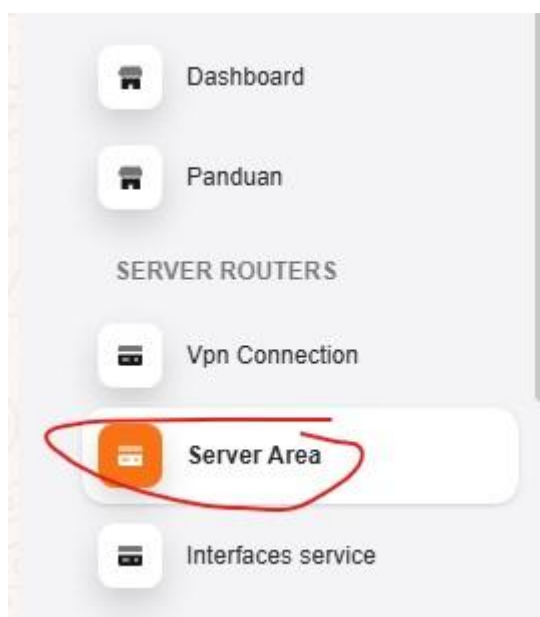

copy semua script

paste di terminal mikrotik
akan ada interface baru L2TP cek di interface

4.mendaftar kan mikrotik ke biling yang telah terkoneksi vpn

masuk ke menu server area di billing

Add New Server

lalu add new server

berikut cara dan langkah nya :

The screenshot shows the 'Add New Server' form and the 'IP Service List' table. Red arrows indicate the mapping of values from the table to the form fields:

- Area: e.g., Central Office
- IP / Domain: 10.10.10.14 (from the table)
- API Port: 8728 (from the table)
- Web Port: 80 (from the table)
- Username: FIBERQ (from the table)
- Password: (from the table)

USERNAME DAN PASSWORD => sesuaikan username password mikrotik anda

5. Selesai

Mikrotik kamu jika sudah ada status online berarti sudah terkoneksi ke billing

AREA	STATUS	IP PUKI API	ACTIONS
 JATIPADANG MEDIAQ	ONLINE	10.10.10.6:8728	Delete
